1 Change History

The following table shows the history of document changes.

Document version	Description	Page(s) with change	Issue Date	Author
1.0	Initial Version	7	5th December 2013	New Channels team
2.0	Added part with "Additional manual"	8	10th July 2018	eCommerce team
3.0	Changed from Mastercard, Visa to all card brands which acceptance is 3D Secure certified	Footnotes	10th December 2020	Kristijan Pleše
3.1	Changed <i>bank</i> to <i>bib</i> in URLs		22nd January 2026	Kristijan Pleše

2 Audience

For the merchants that have their own payment page and for IPSP that are providing their payment pages to the merchants.

3 Transaction Part

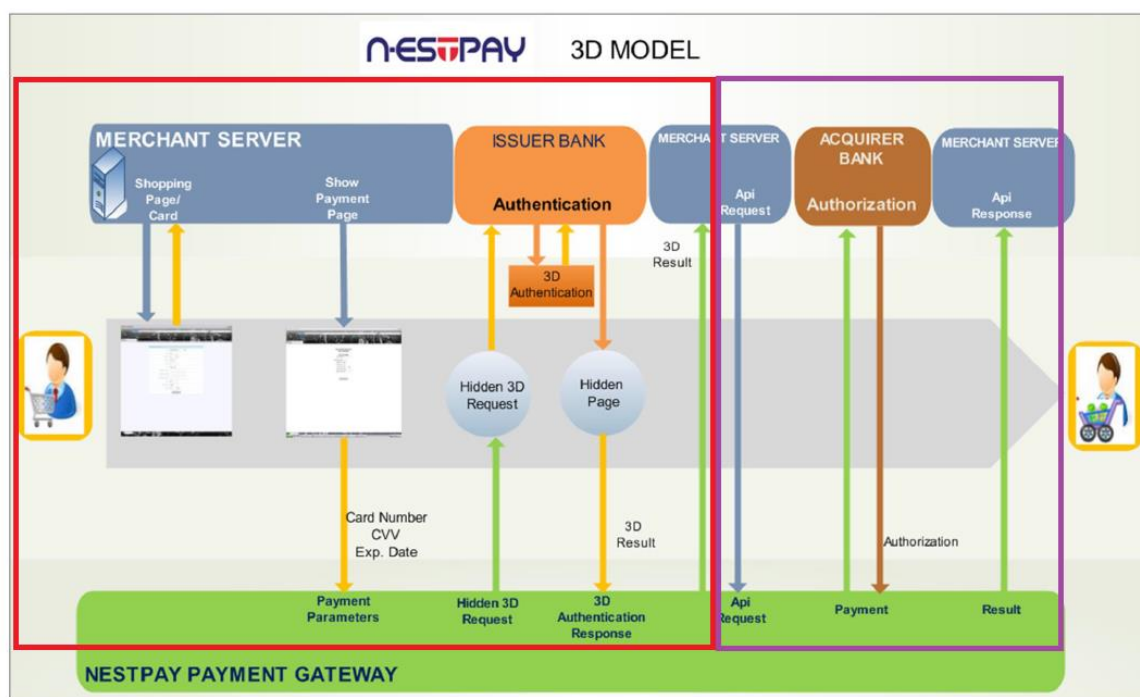

This is for banks' merchants with web payment page that is not hosted on Nexi Croatia NestPay. There are two steps to make payment "3D" http post request for 3D Secure¹ check and "API" for the authorization messages.

The main characteristics of this way of integration are:

- payment page is on Merchant or IPSP side
- cardholder information are collected on Merchant or IPSP side²
- Merchant or IPSP back-office system could be integrated with NestPay

3.1 "3D" and "API" Models Scheme

Ecommerce buying steps for "3D" and "API" models are described on below scheme:

3D Model Diagram

Note: payment page is on Merchant or IPSP side

¹ Only for 3D Secure certificated card brands. Merchants should contact acquiring bank about that.

² For payment page owner (Merchant or IPSP) PCI DSS certification is required.

“3D Model Diagram” represents buying steps in two main parts, starting from the most left yellow arrow. The timeline starts on the left and ends on the right. On acquiring side of ecommerce buying process there are three business entities:

- Merchant’s system presented on upper part of above diagram (blue boxes)
- Customer in the vertical middle part of above diagram (gray box)
- Nexi Croatia/*The Bank* eCommerce acceptance system NestPay on lower part of above diagram (green box)

3.2 Buying Process/Steps

Follows detailed description of “3D”³ part from above Diagram:

1. Customer fills the shopping carts with products and is redirected to Merchants payment page
2. for 3D Secure certificated card brands³ merchant sends HTTP request to NestPay
3. NestPay sends “Hidden 3D Request”, trough Customer browser, to card Issuer bank for 3D secure authentication
4. Issuer bank sends “Hidden Page” to NestPay with 3D Secure³ authentication result
5. NestPay send “3D Result” to Merchant system

“API” part on Diagram (for all accepted card brands):

1. Merchant system sends “API Request” to NestPay with all necessary parameters
2. NestPay sends “Authorization” request to *The Bank*
3. *The Bank* sends “Authorization” response to NestPay
4. NestPay sends “API Response” to Merchant system

3.3 Integration Models/Parts in Short

In “3D” part, HTTP request should be sent to NestPay “3D” link where 3D Secure³ authentication will be checked:

- **TEST** link <https://testsecurepay.eway2pay.com/fim/est3Dgate>
- **PRODUCTION** link <https://bib.eway2pay.com/fim/est3Dgate>

Note: The Bank part of link is known to bank administrator or contact Nexi Croatia administrator.

³ Only for 3D Secure certificated card brands. For other card brands for which bank is not 3D Secure certified, “3D” part is skipped. Merchants should contact acquiring bank about that.

“3D” HTTP post requests are in detail described in “*Nexi Croatia_Nestpay_Merchant_Integration_3D.pdf*” manual:

1. “3D” model enables processing 3D Secure³ card authentication:
 - a. HTTP post method for 3D Secure³ check
 - b. payment page is hosted by Merchant or IPSP
 - c. data get in 3D Secure³ authentication check will be delivered to Merchant in NestPay “3D” response

The values get in 3D Secure authentication check inside “3D” part and other mandatory/optional fields merchant must sent to NestPay “API” link:

- **TEST** link <https://testsecurepay.eway2pay.com/fim/api>
- **PRODUCTION** link <https://bib.eway2pay.com/fim/api>

Note: The Bank part of link is known to bank administrator or contact Nexi Croatia administrator.

2. How merchant has to create “API” authorization requests is described in “*Nestpay_Merchant Integration API Manual.pdf*” manual:
 - a. Primary transactions (preauthorization, auto-postauthorization)
 - b. Secondary transactions (postauthorization, void, refund)
 - c. Order status query
 - d. Order history query

Note: “Order Detail Service” is replacement for “Order Query Service” from “*Nestpay_Merchant Integration API Manual.pdf*”. It is explained in “*Nestpay_OrderDetailService.pdf*”. In the future “Order Query Service” development won’t be supported.

4 Merchant Administration

Merchant administration back-office system on NestPay is **Merchant Center**.

Merchant Center could be seen in web browsers and links for test and production environment are:

- **TEST** link <https://testsecurepay.eway2pay.com/bib/report/user.login>
- **PRODUCTION** link <https://bib.eway2pay.com/bib/report/user.login>

Note: The Bank part of link is known to bank administrator or contact Nexi Croatia administrator.

This application is used for:

- administration:
 - o orders
 - o transactions
 - o users
 - o merchant parameters for connection to NestPay transaction system
- searching:
 - o downloading needed documents for integration with NestPay transaction system
 - o bank information
 - o help

and many other things related to NestPay transaction system. The details could be found in “*NestPay_MerchantCenterUserManual.pdf*” manual.

Merchant Center links for IPSP administrator login as Group Merchant administrator are:

- **TEST** link <https://testsecurepay.eway2pay.com/bib/report/group.login>
- **PRODUCTION** link <https://bib.eway2pay.com/bib/report/group.login>
Note: The Bank part of link is known to bank administrator or contact Nexi Croatia administrator.

Note: for login to Merchant Center merchant or merchant IPSP have to prepare “Merchant ID”/“Group ID”, “User Name” and initial “Password”. For credentials of Merchant administrator or Group Merchant administrator Merchant or merchant IPSP can contact bank by clicking on *Support* link on **Merchant Center** login page.

5 Merchant Integration with NestPay Transaction and Back-Office System

In following paragraphs it will be described the main steps of merchant integration, with links and documents for integration.

5.1 Downloading Manuals from Merchant Center (test)

To download manuals merchant has to login to **Merchant Center**. For login *Merchant Id*, *Username* and *Password* for Merchant Administrator role is provided by *The Bank*.

The **Merchant Center** links are:

- **TEST** link <https://testsecurepay.eway2pay.com/bib/report/user.login>.
- **PRODUCTION** link <https://bib.eway2pay.com/bib/report/user.login>

Note: The *Bank* part of link is known to bank administrator or contact Nexi Croatia administrator.

There are three main manuals:

- *"Nestpay_Merchant_Integration_3D.pdf"* - transaction manual for 3D Secure⁴ HTTP post requests and responses with explanations of mandatory/optional parameters and examples
- *"Nestpay_Merchant Integration API Manual.pdf"* - transaction manual for authorization API requests and responses with explanations of mandatory/optional parameters and examples
- *"NestPay_MerchantCenterUserManual.pdf"* - merchant administration manual for Merchant Center back-office system

Additional manual:

- *"Nestpay_OrderDetailService.pdf"* - explanation for "Order Detail Service" which is replacement for "Order Query Service" described in *"Nestpay_Merchant Integration API Manual.pdf"*, "Order Query Service" additional development won't be supported

5.2 Development of Merchant System (Test)

Merchants need to develop test system for integration with NestPay following rules and examples from downloaded manuals.

For developing of "3D" & "API" model of integration merchant or IPSP should follow *"Nestpay_Merchant_Integration_3D.pdf"* for "3D" part and *"Nestpay_Merchant Integration API Manual.pdf"* for "API" part.

The values/data in "3D" part merchant will receive on URL sent in "3D" http post request and send them in "API" request. Mandatory and optional parameters for "3D" and "API" requests/responses are listed in mentioned manuals.

While developing merchant site and payment page merchant must follow rules provided by *The Bank*. Before production *The Bank* will check Merchant site and payment page.

⁴ Only for 3D Secure certificated card brands. For other card brands for which bank is not 3D Secure certified, "3D" part is skipped. Merchants should contact acquiring bank about that.

5.3 Checking/Changing Store Key and Creating API Role User for Transactions

For making 3D Secure authentication check with “3D” request merchant needs *Merchant ID*, already provided in one of previous steps, and *Store Key*. Merchant or IPSP could find *Store Key* in **Merchant Center** under *Administration* tab *Change Store Key* link in *Old Store Key* parameter box.

Also merchant or IPSP must create **API role** that will be used in sending API authorization requests to NestPay. To create new API role user merchant or IPSP must go in **Merchant Center**. Under *Administration* tab click on *Add New User* link and enter all data about API user with selected “**API User**” role.

The links for **Merchant Center** are in “[4 MERCHANT ADMINISTRATION](#)” paragraph.

5.4 Test Merchant System

Merchant or IPSP administrator must make mandatory test cases with test cards that are given by *The Bank*.

There is a difference in making transactions whether card brands are included in 3D Secure or not:

I. Card brands that are included IN 3D Secure⁵

1. send HTTP post request for 3D Secure authentication check to “3D” link

- **TEST** <https://testsecurepay.eway2pay.com/fim/est3dgate>
- **PRODUCTION** link <https://bib.eway2pay.com/fim/est3dgate>

Note: The *Bank* part of link is known to bank administrator or contact Nexi Croatia administrator.

2. to make authorization send API request with all 3D Secure parameter values which were received in “3D” response:

- <Number>md</Number>
- <PayerSecurityLevel>eci</PayerSecurityLevel>
- <PayerTxnId>xid</PayerTxnId>
- <PayerAuthenticationCode>cavv</PayerAuthenticationCode>

and all other API request mandatory/optional parameters to “API” link

⁵ Only for 3D Secure certificated card brands. Merchants should contact acquiring bank about that.

- **TEST** link <https://testsecurepay.eway2pay.com/fim/api>
- **PRODUCTION** link <https://bib.eway2pay.com/fim/api>

Note: The Bank part of link is known to bank administrator or contact Nexi Croatia administrator.

II. Card brands that are NOT in 3D Secure⁶

1. Must send authorization request with card number inside parameter <Number> and all API request mandatory/optional parameters. For those card brands "3D" post request has to be skipped, or merchant will get an 3D Secure error to make authorization request to "API" link

- **TEST** link <https://testsecurepay.eway2pay.com/fim/api>
- **PRODUCTION** link <https://bib.eway2pay.com/fim/api>

Note: The Bank part of link is known to bank administrator or contact Nexi Croatia administrator.

Note: *Test cases* and *Test cards* could be downloaded from Merchant Center **TEST** link <https://testsecurepay.eway2pay.com/bib/report/user.login> in *Documents* under *Help* tab.

Note: The Bank part of link is known to bank administrator or contact Nexi Croatia administrator.

Which test cases are mandatory for the Merchant depends on functionalities and transaction types used by merchant.

After all mandatory tests are done Merchant should contact *The Bank* to approve test process. If some test is failed, then must be repeated.

5.5 Switch to Production

When all previous steps are successfully finished merchant or IPSP will get production parameters (links, *Merchant Id/Group ID*, *User Name* and *Password*) from *The Bank*.

However, merchant or IPSP should repeat step with checking/changing *Store Key* and creating API role in production environment. After that merchant could make production transactions.

⁶ Only for 3D Secure certificated card brands. Merchants should contact acquiring bank about that.

Note: Merchant has to login to production Merchant Center and take correct *Store Key* and create *API role* user before is ready to make production transactions. This is described [above](#).

6 General Notes

- Do not use *Test cards* on production environment
- For any question related to integration *The Bank* contact information on Merchant Center login page could be found
 - **TEST** <https://testsecurepay.eway2pay.com/bib/report/user.login>
 - **PRODUCTION** <https://bib.eway2pay.com/bib/report/user.login>

Note: The Bank part of link is known to bank administrator or contact Nexi Croatia administrator.

- The Merchant security parameters (Merchant ID, User Name and Password) are different for test and production environment

7 Abbreviations

(I)PSP = (Internet) Payment Service Provider with more than one merchant connected to its system

IPG = Internet Payment Gateway

MPI = Merchant Plug-In, renamed in **3DS Server** for EMVCo 3DS 2.x

3D Secure⁷ authentication = secure way of card holder authentication (usually one time password) on the bank which issued the card used for payment in ecommerce transaction.

Name for 3D Secure is different for different card brands:

- *Mastercard Identity Check*
- *Visa Secure*
- *American Express SafeKey*
- *Diners ProtectBuy*
- *DinaCard Secure*

NestPay = new ecommerce payment gateway for *The Bank* merchants provided by Nexi Croatia

Nexi Croatia = payment processor hosting NestPay payment gateway

Types of transaction messages in comparison to previously used names (only for merchants that were using old ecommerce platform, before 2014):

- preauthorization = preauthorization/authorization with completion
- auto-post-authorization/sale = authorization/ authorization without completion
- post-authorization = completion
- void = reversal/cancellation transaction
- refund/credit = refund
- order status query = authorization check status/completion check status

⁷ Only for 3D Secure certificated card brands. Merchants should contact acquiring bank about that.
